

EXTERNAL NOZZLES FOR INTERNAL COATING

Ecco spray gun users have been asking Ecco Finishing for enabling them to match the excellence they were used to for internal coatings.

Ecco is now proud to present it's first solutions of the new complete extension program, to meet the most common but demanding requirements from the market.

These extensions fit directly on the latest Ecco spray gun models, both on Ecco 75AP, Ecco 68AS and Ecco 51AS.

Ecco LP Ext 90 XS

This extensions allows to spray low viscosity fluids inside bottles or other small diameter cylinders. The spraying angle covers the side, but also the bottom and the upper shoulders of the bottle if any.

The outer diameter of the extension allows it to dive into small bottles or vials, while the fan has been designed to match most applications. The perfect fit when object to spray is installed on a spinning jig. As for all Ecco extensions, the needle closes at the tip for sharp and precise open/close response.

External diameter : 8mm

Extension length : 300mm

Nozzle diameters available : 0.3mm, 0.5mm

Spraying angle and pattern : 60-135° in one direction

Ecco LP Ext 360 XS

A 360° spraying nozzle allows this thin extension to spray low viscosity fluids inside non-spinning objects. The high performance provided by the advanced nozzle design allows excellent atomization and finishing quality. The needle closes at the tip for sharp and precise open/close response.

External diameter : 8mm

Extension length : 300mm

Spraying angle and pattern : 360°

Spray pattern width : 10 to 30mm depending on distance to object.

Ecco LP Ext 360 XL

Spraying medium viscosity fluids, with medium flow, with the very best atomization, this 15mm diameter versatile extension offers a wide range of possibilities to the user. It has proven its efficiency on highly demanding applications where top finishing quality and perfect coating thickness distribution were required. The needle closes at the tip for sharp and precise open/close response.

External diameter : 15mm

Extension length : 300mm

Spraying angle and pattern : 360°

Spray pattern width : 20 to 50mm depending on distance to object.

CUSTOMIZED FINISHING AND SEALING SOLUTIONS
